AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the aboveidentified application. Please cancel claims 1-20.

Claims:

1-20 (Cancelled)

- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the steps of
 - a) exposing a substance to a protein selected from the group consisting of the MAB1, MAB2, MAB3 or OLE1 expression products, and
 - evaluating the effect of the substance on the stability of the expression product, wherein the inhibition of the expression product indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the steps of
 - a) exposing a substance to a protein selected from the group consisting of the MAB1, MAB2, MAB3 or OLE1 expression products, and
 - evaluating the effect of the substance on the stability of the expression product, wherein the inhibition of the expression product indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as antiviral therapy, comprising the step of
 - a) exposing the substance to a protein expression system, wherein the system expresses a protein selected from the group consisting of MAB1, MAB2, MAB3 or OLE1 expression products, and
 - evaluating the effect of the substance on the expression level of the expression product, wherein the inhibition of the expression level indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the step of

Application No. 10/618,896 Response Dated October 30, 2008 Reply to Office Action of May 8, 2008

- a) exposing a substance to a transcription system, wherein the system transcribes an mRNA product selected from the group consisting of MAB1, MAB2, MAB3 or OLE1 mRNAs, and
- evaluating the effect of the substance on the expression level of the mRNA product, wherein the inhibition of the expression level indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the step of
 - a) exposing a substance to a transcription system, wherein the system transcribes an mRNA product selected from the group consisting of MAB1. MAB2. MAB3 or OLE1 mRNAs. and
 - evaluating the effect of the substance on the stability of the mRNA product, wherein the decrease in stability indicates that the substance is a possible antiviral therapy.
- (Currently Amended) A method of evaluating a substance as a positive strand RNA antiviral agent, comprising the steps of
 - a) exposing a substance to a yeast or mammalian $\triangle 9$ fatty acid desaturase enzyme, and
 - evaluating the effect of the substance on the stability of the
 enzyme, wherein decrease in stability indicates that the substance is [[a]]
 an antiviral agent against positive strand RNA <u>virus antiviral agent</u>.
- (Currently Amended) A method of evaluating a substance as a positive strand RNA antiviral agent, comprising the steps of
 - a) exposing a substance to a yeast or mammalian $\Delta 9$ fatty acid desaturase enzyme, and
 - evaluating the effect of the substance on the activity of the
 enzyme, wherein the inhibition of activity indicates that the substance is
 [[all an antiviral agent against positive strand RNA virus antiviral agent.
- (Withdrawn) A method of evaluating a substance as antiviral therapy, comprising the step of

- a) exposing a substance to a protein expression system, wherein the system expresses a $\Delta 9$ fatty acid desaturase enzyme, and
- evaluating the effect of the substance on the expression level of the enzyme, wherein the inhibition of the expression level indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the step of
 - a) exposing a substance to a transcription system, wherein the system transcribes a $\Delta 9$ fatty acid desaturase enzyme mRNA product, and
 - evaluating the effect of the substance on the expression level of the mRNA product, wherein the inhibition of the expression level indicates that the substance is a possible antiviral therapy.
- (Withdrawn) A method of evaluating a substance as an antiviral therapy, comprising the step of
 - a) exposing a substance to a transcription system, wherein the system transcribes a $\Delta 9$ fatty acid desaturase enzyme mRNA product, and
 - evaluating the effect of the substance on the stability of the mRNA product, wherein the decrease in stability indicates that the substance is a possible antiviral therapy.
- (New) A method of evaluating a substance as a positive strand RNA antiviral agent, comprising the steps of
 - a) exposing a substance to yeast OLE1 desaturase enzyme, and
 - evaluating the effect of the substance on the stability of the enzyme, wherein decrease in stability indicates that the substance is an antiviral agent against positive strand RNA virus.
- (New) A method of evaluating a substance as a positive strand RNA antiviral agent, comprising the steps of
 - exposing a substance to a yeast OLE1 desaturase enzyme, and
 - evaluating the effect of the substance on the activity of the enzyme, wherein the inhibition of activity indicates that the substance is an antiviral agent against positive strand RNA virus.
